CC malignant hepatoma, melanoma, ascites etc. Mutations of the p53 gehe CC exist in more than half of cancer cases. The treated or non-treated CC cancers which consist of a defective p53 tumour suppressor gene or an CC activated oncogene are good candidates for this method of therapy. IThe CC oncolytic viruses of this invention comprise genetically modified Ad5 CC variants. This oncolytic adenovirus selectively replicates in cancer CC cells with a p53 mutation and lyses cancer cells with high specificity. CC modified variant Ad5 (598-001) has an extra stop codon at position 2025 CC (EIb region) and possesses deletions in Eib region in specificity. CC modified variant Ad5 (598-001) has an extra stop codon at position 2025 CC (EIb region) and possesses deletions in Eib region (in between 2,501 and CC ells EIb-55KD binds and inactivates the protein encoded by the p53 gene CC replicate in normal cells, but replicates rapidly in cancer cells in CC which the p53 protein is dysfunctional. The function of E3 is related to the ability of an adenovirus to escape from the surveillance of the immune system easier recognition of the E3 region in S98-001 enables CC region encoding E1b-55KD (in between 2,501 and 45. It has deletions in the CC aregion encoding E1b-55KD (in between 2,501 and 3,328) and of the entire CC explicate in cancer cells. So, 598-001 and 399-002 are safe for use in the CC adenovirus DNA. Note: This sequence is the wild type AD5 cc and sequence is the example 1 of the specification. This sequence is referred cc the sequence in example 1 of the specification. This sequence is referred as SEQ ID No 4 in the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to the compositions and methods for ablating tumour cells in a subject having one or more tumour sites. The method includes introduction of a lytic agent into a tumour (which|forms a treated tumour) and application of stimulus to the treated tumour. The stimulus (physical, chemical or biological) induces the level of chapperone proteins (heat shock proteins) in the tumour cells. The 'combination of the lytic agent and tumour cell stimulus leads to thmour shrinkage. The invention relates to the synchronisation between onicolysis and elevated expression of a heat shock protein (HSP), which results in sufficient release of HSP-CRA (cancer reactive antigen). The sufficient levels of HSP-CRA exhibit a signal immunogenic enough to the immune system in order to elicit an immune response against the cancer. The method of the invention is useful in ablating tumour cells for treating naconhaverseal carriers chapter.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Hu F,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               nasopharyngeal carcinoma, chondrosarcoma, colon cancer, breast cancer, prostate cancer, ovarian cancer, stomach carcinoma, rectum cancer,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ablating tumor cells in a subject having at least one tumor site by contacting the tumor cells in at least one tumor with a lytic agent in vivo and applying a sufficient in vivo stimulus to the treated tumor forming a stimulated tumor.

```
The invention relates to a recombinant adenovirus vector which is replication-
CC overexpresses an adenovirus death protein (ADP) and which is replication-
CC restricted to cells expressing telomerase, comprises a human telomerase
CC restricted to cells expressing telomerase, comprises a human telomerase
CC reverse transcriptase promoter (hrmn) and at least one inactivating
CC for promoting death of a cell expressing telomerase, and for promoting
CC for promoting death of a cell expressing telomerase, and for promoting
CC death of neoplastic cells in a patient. The adenovirus vector is an
CC efficient and effective anticancer agent that could specifically target
CC neoplastic cells, while replicating poorly or not at all in normal
CC tissue, and efficiently spreading to neighbouring neoplastic cells,
CC thereby maximising its cancer-killing ability. The presence of human
CC telomerase reverse transcriptase promoter allows restriction of
CC coplication of the adenovirus to cells expressing telomerase without the
CC need for complementation to achieve replication competence in these
CC cells. The present sequence is adenovirus vector GZ3-TERT which comprises
CC an ADP gene, a hTERT promoter, and a mutation in the E3 region
                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           gene products (II) of the adenoviral EIA and EIB regions. (A) are used to produce gene therapy vectors, especially adeno, adeno-associated, retro or lenti viral vectors, particularly first- or second generation, large-capacity or deleted adenoviral vectors. (A) are also used to produce adenoviral mutants, optionally with modified tropism. The vectors may express a wide range of therapseutic proteins or antisense RNAs. Adenoviral mutants, unable to express the EIB 55 kDa protein, are useful for treating tumors, they replicate in the cells but not significantly in normal primary cells. (A) can be made efficiently, simply and reproducibly. The products of the invention have cytostatic activity. This sequence represents a PCR primer used in the amplification of adenovirus Ad5 DNA which is described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 7090 BP; 1696 A; 1685 C; 1882 G; 1827 T; 0 U; 0 Other;

                       The specification describes a method of treating cancer or hyperproliferative disorders. The method comprises administering a conditionally replicative viral vector, where at least one of the viral nucleic acids encoding a product essential for its replication is operably linked to an H19 regulatory sequence. The method is useful for treating cancer or hyperproliferative disorders. The cancer is selected from many different types, for example, carcinoma, sarcoma, adenoma and ganglioblastoma. Preferably, the cancer is bladder carcinoma. The present sequence encodes the E1a protein of human adenovirus type 5. It was linked to a H19 regulatory sequence, and used to produce vectors for use in the method of the invention
                                                                                                                                                                                                                      Treating cancer or hyperproliferative disorder comprises administering conditionally replicative viral vector, where the viral nucleic acid encoding a product essential for its replication is operably linked to
                                                                                                                                                                                                                                                                           WPI; 2003-441263/41.

The mRNA samples challenged with different treatments. The mRNA samples were a mixture of these conditions (times refer to incubations following isolation by bronchoalveolar lavage) (some normal donor macrophages were cultured in some of the conditions). The mRNA samples were pooled for library construction. Control 0 hours; control 3 hours; control 3 hours; control 3 hours; control 0 hours; control 3 hours; control 0 ng/ml, 24 hours; control 24 hours; LPS 100 ng/ml, 24 hours; Rlebsiella moi 10, 3 hours; Klebsiella moi 10, 4 hours; Klebsiella moi 10, 3 hours; Klaph aureus moi 10, 4 hours; Klaph aureus moi 10, 3 hours; Klaph aureus moi 10, 3 hours; Klaph aureus moi 10, 4 hours; Klaph aureus moi 10, 4 hours; Rlebsiella moi 10, 4 hours; Rlebsiella moi 10, 4 hours; Rlebsiella moi 10, 5 hours; Adenovirus hours; Madenovirus moi 500, 5 hours; Adenovirus hours; Madenovirus moi 500, 5 hours; Adenovirus + LPS 3 hours; Adenovirus + LPS 4 hours; Adenovirus + LPS 3 hours; Adenov

```

```
extracted from 200 adult male mouse RPE/choroids. A directionally cloned cDNA library in the pSPORT1 vector(Life Technologies) was constructed at Bioserve Biotechnology (Laurel MD) essentially following the protocols of the SuperScript Plasmid System full details of which are contained in the manufacturer's Instruction manual (http://www.lifetech.com/). First strand synthesis was carried out using a Not I primer-adapter [5'-pGACTAGTCTAGATCGGAGCGGCCGCC(T).5-3']. cDNA was cloned in Not I/Sal I sites. EST analysis was performed the unamplified library at the NIH Intramural Sequencing Center (NISC)."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   modified polylinker; Site 1: ECOR I; Site 2: Not I;

NCI_CGAP_FT1 is a normalized cDNA library_constructed from
a pool of 81 RNA samples from Alveolar Macrophages
challenged with different treatments. The mRNA samples
were a mixture of these conditions (times refer to
incubations following isolation by bronchoalveolar lavage)
(some normal donor macrophages were cultured in some of
the conditions, other donor macrophages in different
conditions). The mRNA samples were pooled for library
construction. Control 0 hours; control 3 hours; control 24
hours; LPS 100 ng/ml, 3 hours; LPS 100 ng/ml, 24 hours; CPS 100 ng/ml, 3 hours; LPS 100 ng/ml, 24 hours; Klebsiella
moi 10, 3 hours; Klebsiella moi 10, 24 hours; Klebsiella
moi 10, 3 hours; Staph aureus moi 10, 24 hours; Klebsiella
moi 10, 3 hours; Staph aureus moi 10, 24 hours; Adenoviral
vector (Ad5 CMV eGFP), moi 500, 3 hours; Adenoviral vector
(Ad5 CMV eGFP), moi 500, 24 hours; Wt adenovirus moi 500,
3 hours; Wt adenovirus moi 500, 24 hours; Adenovirus + LPS
3 hours; Ad vector + LPS 24 hours; Wt adenovirus + LPS 3
hours; Wt adenovirus + LPS 24 hours. The library was
normalized according to Bonaldo, Lennon and Soares, Genome
Research, 6:791-806, 1996. First strand cDNA synthesis was
primed with an oligo-dT primer containing a Not I site.
Double stranded cDNA was ligated to an EGGR I adaptor,
digented with Not I and cloned directionally into
                                                                                                                                                                                                                                                                                                                                                                      digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is GGCCATGCCG. The tissue was provided by Dr. Gary W. Hunninghake of the University of Iowa.
                                                                                                                                                                                                                                                                                                                       TAG_LIB=UI-H-FT1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /clone_lib="NCI_CGAP_FT1"

//note="Organ: Lung; Vector: pT7T3-Pac (Pharmacia) with a modified polylinker; Site_1: EcoR I; Site_2: Not I; NCI CGAP FT1"
NCI CGAP FT1 is a normalized cDNA library constructed from a pool of 81 RNA samples from Alveolar Macrophages challenged with different treatments. The mRNA samples were a mixture of these conditions (times refer to incubations following isolation by bronchoalveolar lavage) (some normal donor macrophages were cultured in some of the conditions, other donor macrophages in different conditions, other donor macrophages in different conditions). The mRNA samples were pooled for library construction. Control 0 hours; LPS 100 ng/ml, 24 hours; control 24 hours; LPS 100 ng/ml, 3 hours; LPS 100 ng/ml, 24 hours; klabsiella moi 10, 3 hours; Klabsiella moi 10, 4 hours; Klabsiella moi 10, 3 hours; Staph aureus moi 10, 24 hours; Klabsiella vector (Ad5 CMV eGFP), moi 500, 24 hours; wt adenoviral vector (Ad5 CMV eGFP), moi 500, 24 hours; wt adenoviral vector (Ad5 CMV eGFP), moi 500, 24 hours; Hadenoviral vector the S 24 hours; wt adenoviral vector the S 24 hours; wt adenoviral vector the S 24 hours; wt adenoviral vector the S 25 hours; hadenoviral to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site.

Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pTT3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT) la tail. The sequence tag for this library is GCCATGCCG. The tissue was provided by Dr. Gary W.

NCI_CGAP_FT1 is a normalized cDNA library constructed from a pool of 81 RNA samples from Alveolar Macrophages challenged with different treatments. The mRNA samples were a mixture of these conditions (times refer to incubations following isolation by bronchoalveolar lavage) (some normal donor macrophages were cultured in some of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  TAG_SEQ=GCCATGCCG"

/clone = Torgan: Lung; Vector: pT773-Pac (Pharmacia) with a modified polylinker; Site 1: EcoR I; Site 2: Not I; NCI CGAP From 1s a normalized cDMA library constructed from a pool of 81 RNA samples from Alveolar Macrophages challenged with different treatments. The mRNA samples challenged with different treatments. The mRNA samples were a mixture of these conditions (times refer to incubations following isolation by bronchoalveolar lavage) (some normal donor macrophages were cultured in some of the conditions, other donor macrophages in different conditions). The mRNA samples were pooled for library construction. Control 0 hours; control 3 hours; control 24 hours; control 10 ng/ml, 24 hours; control 24 hours; LPS 100 ng/ml, 24 hours; control 24 hours; LPS 100 ng/ml, 24 hours; Staph aureus moi 10, 3 hours; Klebsiella moi 10, 24 hours; Klebsiella moi 10, 3 hours; Klebsiella moi 10, 24 hours; Klebsiella moi 10, 3 hours; Klebsiella moi 10, 24 hours; Klebsiella vector (Ad5 CMV eGFP), moi 500, 3 hours; Adenovirus + LPS 3 hours; Adenovirus +

/notes "Organ: Lung; Vector: pT7T3-Pac (Pharmacia) with a modified polylinker; Site 1: EcoR ; Site 2: Not 1; NCI CGAP PT2 is a subtracted cDNA library-constructed from a pool of 81 RNA samples from Alveolar Macrophages; challenged with different treatments. The mRNA samples challenged with different treatments the mRNA samples were a mixture of these conditions (times refer to incubations following isolation by bronchoalveolar lavage) (some normal donor macrophages were cultured in some of the conditions, other donor macrophages in different conditions). The mRNA samples were pooled for library construction. Control 0 hours; control 3 hours; control 24 hours; LPS 100 ng/ml, 3 hours; LPS 100 ng/ml, 24 hours; hours; LPS 100 ng/ml, 24 hours; Rebsiella moi 10, 3 hours; Klebsiella moi 10, 24 hours; Wadenoviral vector (Ad5 CMV eGFP), moi 500, 3 hours; Wadenoviral vector (Ad5 CMV eGFP), moi 500, 3 hours; Wadenoviral vector + LPS 3 hours; Wadenovirus + LPS 3 hours; Wadenovirus + LPS 3 hours; Wadenovirus + LPS 24 hours; Wadenovirus + LPS 3 hours; Wadenovirus + LPS 24 hours; Wadenovirus + LPS 3 hours; Wadenovirus + LPS 24 hours; Wadenovirus + LPS 3 hours; Wadenovirus + LPS 3 hours; Wadenovirus + LPS 24 hours; Wadenovirus + LPS 3 hours; Wadenovirus + LPS 3 hours; Wadenovirus + LPS 24 hours; Wadenovirus + LPS 3 hours; Wadenovirus + LPS 3 hours; Wadenovirus + LPS 3 hours; Wadenovirus + LPS 24 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            sapiens (human)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 1, Application US/09245497

Patent No. 6083750

GENERAL INFORMATION:

APPLICANT: Chamberlain, Jeffrey S.

APPLICANT: Amalficano, Andrea

APPLICANT: Hauser, Michael A.

APPLICANT: Kumar-Singh, Rajendra

APPLICANT: Hartigan-O'Connor, Dennis J.

APPLICANT: Hartigan-O'Connor, Dennis J.

TITLE OF INVENTION: IMPROVED ADENOVIRUS VECTORS

NUMBER OF SEQUENCES: 15

CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
